

Follow-up Questionnaire

The overall goal of this questionnaire is to acquire information about the identification task of design problems. All information collected in this questionnaire will be treated confidentially.

General Information

1. Developer name:

2. Company name:

3. Name of the system (or systems) that you analyzed during the identification task

Post-experiment questionnaire

1. In your opinion, which was the design problem type that you had more difficult to identify? Why?

2. Regarding the previous question, which steps did you follow to identify it?

3. In your opinion, which was the design problem type that was the easiest one to identify? Why?

4. Regarding the previous question, which steps did you follow to identify it?

5. Which information do you believe that could help you to identify design problems but it was not provided?

6. Do you have any other comment that could provide us information about the identification of design problems?
